

March 10, 2016

The Honorable Tom Cole Chairman Appropriations Subcommittee on Labor, Health and Human Services, Education and Related Agencies U.S. House of Representatives Washington, D.C. 20515 The Honorable Rosa DeLauro
Ranking Member
Appropriations Subcommittee on Labor,
Health and Human Services, Education
and Related Agencies
U.S. House of Representatives
Washington, D.C. 20515

Dear Chairman Cole and Ranking Member DeLauro:

With the federal government being the largest purchaser of health care—more than \$1 trillion per year and rising—it has a responsibility to fund research that determines how to make care as effective, efficient, affordable, equitable, and safe as possible. The Agency for Healthcare Research and Quality (AHRQ) is the only federal agency with the sole purpose of generating and disseminating such evidence. The health services research, quality improvement protocols, datasets, and tools supported by AHRQ are used in hospitals, medical centers, physician practices, and public health departments in communities across the nation to improve the quality, access, and value of the health care system.

As you draft the Labor, Health and Human Services, Education and Related Agencies (Labor-HHS) appropriations legislation for fiscal year (FY) 2017, the undersigned members of the Friends of AHRQ respectfully request \$364 million in budget authority—consistent with the president's discretionary funding request and FY 2015 level.

The Friends of AHRQ thank the subcommittee for recognizing that AHRQ plays a critical role in the research continuum—helping patients get the most from new discoveries in basic and clinical research by improving health care delivery. Your stewardship recognizes that indeed, AHRQ is building upon and extending the work of its public and nongovernmental partners to ensure patients get the right care at the right time, every time. More specifically:

• AHRQ helps providers help patients. Americans want to take personal responsibility for their health, and they rely on their doctors, nurses, pharmacists and other health care providers for guidance in making difficult choices. AHRQ-supported research generates valuable evidence to help providers help patients make the right health care decisions for themselves and their loved ones. For example, AHRQ will soon award a series of three-year research grants to advance implementation of Medication-Assisted Treatment (MAT) for opioid use disorder in primary care practices in rural areas of the United States. In addition to expanding access to this evidence-based therapy in underserved communities, these research studies will discover and test solutions to overcoming known barriers to implementation of MAT in primary care and create training and implementation resources to support future efforts to expand access to MAT.

- AHRQ keeps patients safe. The science funded by AHRQ ensures patients receive high quality, appropriate care every time they walk through the hospital, clinic, and medical office doors. AHRQ's research provides the basis for protocols that prevent medical errors and reduce hospital-acquired infections (HAI), and improve patient experiences and outcomes. In just one example, AHRQ's evidence-based Comprehensive Unit-based Safety Program to Prevent Healthcare-Associated Infections (CUSP)—first applied on a large scale in 2003 across more than 100 ICUs across Michigan—saved more than 1,500 lives and nearly \$200 million in the program's first 18 months. The protocols have since been expanded to hospitals in all 50 states, the District of Columbia, and Puerto Rico to continue the national implementation of this approach for reducing HAIs.
- AHRQ makes the business case for high quality care. AHRQ helps health care providers from private practice physicians to large hospital systems understand how to deliver the best care most efficiently. For example, AHRQ maintains the National Quality Measurement Clearinghouse (NQMC) to provide health care providers, health plans, delivery systems, and others with an accessible resource for quality measures and a one-stop-shop for benchmarks on providing more safe, effective and timely care. The breadth of evidence available from AHRQ empowers health care providers to understand not just how they compare to their peers, but also how to improve their performance to be more competitive.

The Friends of AHRQ appreciate that competing priorities abound and resources are increasingly scarce, and we recognize the importance of investing federal funds wisely. We urge you to restore the \$30 million cut AHRQ sustained in the Consolidated Appropriations Act of 2016 and provide the agency \$364 million in FY 2017, because it isn't enough to *develop* cures. Understanding how to most effectively and efficiently *deliver* cures to patients through health services research is a critical component on the health research continuum, and one that has implications for health care quality, cost, access and ultimately patient outcomes.

We thank you for your consideration of our request and look forward to helping you preserve the agency's unique role in generating evidence on the quality of health care and ensuring the evidence is used in practice.
