October 6, 2021

The Honorable Nancy Pelosi Speaker of the House Washington, DC 20515

The Honorable Kevin McCarthy Minority Leader U.S. House of Representatives Washington, DC 20515 The Honorable Charles Schumer Majority Leader, U.S. Senate Washington, DC 20510

The Honorable Mitch McConnell Minority Leader U.S. Senate Washington, DC 20510

Dear Speaker Pelosi, Majority Leader Schumer, Minority Leader McCarthy, and Minority Leader McConnell:

We, the undersigned organizations urge you to work toward the enactment of the fiscal year 2022 Defense Appropriations Act, to ensure that the Defense Health Research Programs, including the Congressionally Directed Medical Research Programs (CDMRP), are fully funded in fiscal year 2022.

Our organizations appreciate recent actions by Congress to pass a short-term continuing resolution to extend federal agencies and programs through December 3, 2021. However, we are particularly concerned about the possibility of Congress enacting a year-long continuing resolution in lieu of completing the fiscal year 2022 Defense Appropriations Act. Under a year-long continuing resolution **the CDMRP would receive no funding in fiscal year 2022**. Failure to enact the Defense Appropriations Act will have major negative health implications for the millions of Americans – especially veterans, military service members and their families – who live with chronic and debilitating disorders. This will delay important new discoveries and translation of medical innovation into new treatments and cures for many disorders.

We collectively represent millions of American veterans, military retirees, military families, and civilians who benefit from the ongoing research funded by the Defense Health Research Programs at the Department of Defense (DoD). We have worked tirelessly to advocate for continued funding for the programs, and we were pleased to see that the House version of the fiscal year 2022 Defense Appropriations Act includes strong funding levels for medical research.

The Defense Health Research Programs will be unable to fully prepare for the fiscal year 2022 grant solicitation process until they receive a fully-enacted fiscal year 2022 budget. The CDMRP annually receives more than 12,000 pre-applications and 7,000 full applications for grants and undergoes a rigorous process to evaluate and fund the best of these applications. Further delay in enacting the fiscal year 2022 appropriations bill will create unnecessary disruption with internal processes at DoD.

These delays will have systemic impacts on the way the DoD convenes programmatic panels to identify and implement programmatic changes and peer-review panels to provide thorough review of grant applications, and ultimately impact the ability of the DoD to conduct appropriate negotiations to award fiscal year 2022 grants. Further, failure to enact a fully-funded fiscal year 2022 budget will compromise the ability of scientific laboratories across the U.S to effectively plan and prepare the highest quality grant applications, potentially diminishing opportunities to maintain discovery-based research programs and disrupting critical scientific workforces.

The CDMRP is a critical component of the Defense Appropriations Act, and failure to enact this legislation will have a devastating impact on the program. Aside from the obvious biomedical and economic consequences of such actions, such as stalling or eliminating the critical development of new and more effective therapies that lower costs and save lives, failure to enact will interrupt important pipelines that have allowed investigators at U.S. medical research institutions to build careers and act on new and innovative medical research ideas.

We therefore urge you to work together in a bipartisan, bicameral spirit and enact the fiscal year 2022 Defense Appropriations Act.

Sincerely,

ALS Association
