

November 18, 2025

The Honorable Mike Johnson
Speaker of the House
Washington, DC 20515

The Honorable John Thune
Majority Leader, U.S. Senate
Washington, DC 20510

The Honorable Hakeem Jeffries
Minority Leader
U.S. House of Representatives
Washington, DC 20515

The Honorable Charles Schumer
Minority Leader
U.S. Senate
Washington, DC 20510

Dear Speaker Johnson, Majority Leader Thune, Minority Leader Jeffries, and Minority Leader Schumer:

We, the undersigned organizations, urge you to work toward the enactment of the fiscal year (FY) 2026 Defense Appropriations Act, to ensure full funding levels for the Defense Health Research Programs, including the Congressionally Directed Medical Research Programs (CDMRP). We collectively represent millions of American veterans, military retirees, military families, and civilians who benefit from the ongoing research funded by the CDMRP.

Our organizations appreciate actions by the House and Senate Committees on Appropriations to advance their respective versions of the FY2026 Defense Appropriations Act. However, critical time for negotiating a final bill has been lost due to gridlock and the recent federal government shutdown. We are particularly concerned about the possibility of Congress enacting another year-long continuing resolution (CR) in lieu of a final Defense Appropriations bill. The FY2025 Full-Year Continuing Appropriations and Extensions Act, enacted last March, led to devastating consequences, resulting in a 57 percent cut to CDMRP programs below FY2024-enacted funding levels. As a result, 23 of the 35 CDMRP programs received no funding in FY2025.¹ Another long-term CR would risk repeating or even worsening these cuts, undermining the vital research that directly benefits the health of the men and women who serve in the U.S. Armed Services.

Failure to enact the Defense Appropriations Act this year will have serious health consequences for millions of Americans — especially current and former military service members and their families — who live with chronic and debilitating disorders. Further delay will impede critical new discoveries and slow the translation of promising medical innovations into new treatments and cures that could greatly improve or even save lives.

¹ Programs that received no funding in FY25: Alcohol and Substance Abuse Disorder, Arthritis, Autism, Bone Marrow Failure Disease, Combat Readiness Medical, Epilepsy, Hearing Restoration, Glioblastoma, Joint Warfighter Medical, Kidney Cancer, Lung Cancer, Lupus, Multiple Sclerosis, Neurofibromatosis, Orthopaedic, Pancreatic Cancer, Parkinson's Disease, Reconstructive Transplant, Spinal Cord Injury, Tick-Borne Disease, TBI and Psychological Health, Tuberous Sclerosis Complex, Vision.

Protecting Critical CDMRP Funding: A Call to Congress

November 18, 2025

Page 2

Each year, CDMRP engages in a rigorous process of strategic vision setting, proposal solicitations, and a two-step peer and programmatic review of applications to identify and fund the most promising research proposals. The CDMRP annually receives more than 12,000 pre-applications and 7,000 full applications for grants, which undergo both a peer and programmatic review to ensure that only the highest-quality, most innovative projects are selected for funding. Further delays in enacting the FY2026 Defense Appropriations Act will severely disrupt this process. Such delays will adversely impact the Department of Defense's ability to conduct thorough peer-reviewed scientific reviews of grant applications and timely negotiations to award FY2026 grants.

Failure to pass a fully funded fiscal year 2026 budget will also compromise the ability of research institutions and laboratories nationwide across the U.S to effectively plan, prepare and execute the highest quality grant applications. This uncertainty threatens to stall discovery-based research, destabilize critical scientific workforces, and weaken the nation's position as a global leader in biomedical innovation.

The CDMRP is a cornerstone of the Defense Appropriations Act, and failure to enact this legislation will have a devastating impact on these programs. Aside from the obvious biomedical and economic consequences of such actions, failure to enact legislation will interrupt important pipelines that have allowed investigators at U.S. medical research institutions to maintain our leadership as the best in the world as well as build careers and implement new and innovative medical research. Inaction risks halting the development of new therapies that improve outcomes, reduce long-term health costs, and save lives. It will also disrupt vital research pipelines that enable U.S. investigators to pursue bold, innovative ideas and build lasting scientific careers.

We therefore urge Congress to act swiftly and work together in a bipartisan, bicameral spirit to enact the FY2026 Defense Appropriations Act, ensuring that this essential research continues to advance the health and readiness of all Americans.

Sincerely,
